Work

Wingly

Started as a full-stack developer, developed from zero the mobile application, web platform and various other products helping the company scale and grow its business. Currently leading a team of developers, splitting my time between management and coding.

2016 - present

Inock

Worked in a variety of projects building internal tools for prestigious companies like Apple, L'Oréal and Mumm. I had the chance to work with multiple different stacks from proprietary frameworks to Symfony, Meteor, Angular and more.

2014 - 2016

Democritus University of Thrace

Master - Engineering

2011 - 2013

Aristotle University of Thessaloniki

Master - Engineering

2004 - 2011

Mentoring and helping developers to grow.

I've worked for several years as a lead developer and had the chance to collaborate with some great people. I split my time between coding, conducting code reviews and providing guidance to my team. I work closely with the product people to translate their needs into technical requirements.

Autonomous and experienced working in remote environments.

I have led projects from start to finish. From frontend and backend, to setting up CI/CD and organizing the development flows. Worked in agile environments and scrum methodologies.

Strong analytical point of view.

From identifying the problem to deciding on the best solution I've helped in discovery, conducted multiple interviews with domain experts and led the engineering part.

Sensitive about UX/UI design.

Worked closely with designers to create and maintain design systems. Familiar with atomic design principles and tools like Storybook and Figma. Still learning about web accessibility and semantics.

Domain-Driven Design.

Eric Evans changed my whole perception about programming. If my code speaks the same language as your business then I did my job right.

Excellent knowledge of object-oriented programming.

Worked with various MVC frameworks in my career; I have strong knowledge and understanding of OOP principals.
